

Bocam Park Office Development, Bridgend.

We were commissioned to undertake both the soft landscape design and the implementation works involving topsoiling, planting, mulching and seeding to both phase 1 and phase 2 of this the new speculative office development.

In undertaking the works we imported over 525 m3 of topsoil.

The site has been planted with a selection of heavy standard trees, shrubs and ground cover plants. Native structure planted has also been planted on the boundary of the site.

All of the grassed areas were seeded.

By involving us at the very early planning stages of the project, we have been able to provide our client with a very cost effective scheme that has fully satisfied the requirements of the local authority planning department.

On completion of the planting works all areas were mulched with bark.

The scheme is currently being maintained for 12 months from completion of phase 2.
