

Morrison's Superstore, Ebbw Vale.

The works involved undertaking all of the topsoiling and soft landscape works associated with the new superstore.

The initial works required us to prune and remove dead wood from an area of existing planting, coping some species to re-invigorate them all to the approval of the local authority. The arisings were chipped on site and re-used as mulch. A large overgrown Hawthorn hedge was also reduced in height.

Within all of the new soft landscape areas the ground was ripped and in total over 900 m³ of topsoil was imported and spread

The site has been planted with almost 100 No. heavy standard trees and 9,000 No. shrub and ground cover plants. In addition an area of existing planting was enhanced with additional planting and native hedges were planted.

All of the grassed areas were turfed.

On completion of the planting works all areas were mulched with spent mushroom compost. Chestnut pale fencing has been erected to protect the areas from trespass through their establishment period. Since completing the initial works we have also laid additional paving to some areas where the planting has suffered damage through trespass.

Since initially maintaining the works for a period of 12 months through the main building contract, we have been retained directly by Wm Morrison Supermarkets Plc. to maintain the grounds.
