

## Turner Street Play Area, Newport

This project was to provide a new children's play area within an existing park in Newport.

After stripping the topsoil, the site of the proposed play area was stripped and mounds formed from the excavated material. The topsoil was then re-spread and on completion the mounds were seeded.

Concrete edgings were laid both around the perimeter of the play area and also to the edges of the areas where wet pour safety surfacing was to be installed. Bowtop railings were erected around the perimeter of the play area with a self-closing gate.

Play equipment consisting of a roundabout, rocking horse, two sets of swings, two spring mobiles and a modular play unit were installed before the wet pour safety surfacing was laid.

After installing seats, litter bins and signs, tarmac was laid to the remaining areas and the surrounding grassed areas were re-seeded.

A full RoSPA report was then commissioned before the play area was handed over to Newport City Council.
