

Environmental Improvements to Plateau 'A', Victoria Business Park, Ebbw Vale

This contract included both landscaping and extensive security fencing works around a recently built commercial unit and to adjacent land that is designated for future commercial development.

Initial clearance works required us to clear trees and shrubs that were growing adjacent to a drainage ditch.

Approximately 750lm of 'Heras Chaperon' colour coated galvanised weldmesh security fencing was installed along with associated matching gates. Old dilapidated stockproof fencing was taken down and new stockproof fencing erected.

Over 250lm of feature dry stone walling was built including sections of dry stone banking to form a feature on the entrance roundabout. We also laid approximately 35m² of natural pennant cropped stone on edge paving.

After spreading imported topsoil the soft landscape works included the planting of 31 No. semi-mature birch trees together with forestry whips and ornamental shrub and ground cover planting. The ornamental planting included extensive heather planting and upon completion the planted areas were mulched with bark.
